

AEMT INTERNATIONAL EX REGISTER

The AEMT International Ex Register lists AEMT members trained and assessed to repair Hazardous Area Equipment to the relevant certificate and/or standards.

Buncefield, UK. December 2005 - A fault, caused by faulty maintenance of a float control, caused a major spillage and explosion resulting in up to £1 billion in damages.

AEMT: IECEx Recognised Training Provider

The AEMT has been reviewed by IECEx and recognised under the IECEx Recognised Training Provider Program as having implemented processes to manage and provide training services related to the repair, overhaul, and reclamation of equipment operating in explosive (Ex) atmospheres. (IEC Ex competency 005).

Many organizations offer training in Ex technologies however not all of these offer training aligned with the structure and requirements of IECEx OD 503 and IECEx OD 504 that support the IECEx Certified Persons Scheme.

The awarding of Recognised Training Provider (RTP) status by IECEx to the AEMT indicates our commitment to provide relevant training services on the basis that these have been reviewed in accordance with IECEx Operational Document OD 521.

CPD (Continuous Professional Development). The AEMT Atex and Hazardous Area Courses have also been accredited by CPD Certification Service. See www.theaemt.com or www.ex-repair.com

About the Ex Register

The following companies are full members of the AEMT, The Association of Electrical and Mechanical Trades. They have trained a responsible person(s) and at least two employees (operatives), who carry out repairs to Ex equipment. The above staff have attended the AEMT courses, recognised by IECEx, on the repair of Hazardous Area Ex equipment to the International (IEC) and European standards BS EN IEC 60079 19. They have been successfully assessed, and awarded a certificate by the AEMT. The certificate requires updating every three years by a refresher course and re-assessment. The AEMT is part of the IECEx recognised training program.

The companies also hold an approved quality control system such as ISO 9001:2015 incorporating all aspects of repairs to Hazardous Area Ex motors, and other apparatus, ensuring that they are carried out to the latest version of BS EN IEC 60079-19 standard. The international standards was derived from an earlier Code of Practice published jointly by the AEMT and BEAMA, in consultation with the Health and Safety Executive. This also ensures that all equipment used for the repairs is properly calibrated, and that the data concerning each repair is correctly recorded.

Each company must have a responsible person(s) appointed within the management of the organisation, with a working knowledge of the concepts and standards applying to the repair of Hazardous Area Apparatus, and responsible for ensuring that the repaired equipment remains safe after overhaul, and conforms to the original standards, and/or certificate the equipment was manufactured to.

Ex Registered companies have staff that have been assessed on their ability to service and/or repair: Certified Hazardous Atmosphere Equipment such as Motors, Pumps, Fans, Generators, Gearboxes, Transformers, etc. manufactured to the following protection concepts:

Flameproof:	Ex d, Eex d, Eex de.
Increased Safety:	Ex e, Eex e.
Non Sparking:	Ex n, Ex na, Eex na.
Dust:	tD, and other standards of Hazardous Area Apparatus.
Pressurised:	Ex p.
Mechanical Standards:	Ex h incorporating: Ex c (constructional Safety) and k (liquid immersion) and b (Control of ignition sources)

Where possible the apparatus will be repaired to the original certificate, however if the certificate is not available, the apparatus will then be repaired to the original construction standards used during manufacture. This ensures that the requirements of the above international standards are met, and also in Europe the responsibilities under ATEX.

To be listed on the International Ex Register, companies must adhere to the following:

1. At least one Responsible Person of management status, who has attended the AEMT courses, and oversees the Hazardous Area Equipment Repairs.
2. At least 2 Certified employees that have attended the AEMT courses on The Repair of Hazardous Area Ex Equipment within the last 3 years and carry out the equipment servicing and repairs.
3. ISO 9001:2015 quality system,
4. Calibrated equipment suitable for the sizes of machine repaired
5. Repairs carried out to the latest version of BS EN 60079-19 or IEC 60079-19 Standards
6. A library of Certificates and Standards covering the range of equipment being repaired.

IECEX: indicates Service Centres that have been audited as an IECEX Certified Service Facility.

UL: Are approved repairers of United States, UL equipment.
